

## CLIPSAL 500 RACE TRACK, ADELAIDE, SOUTH AUSTRALIA

**S**FL are currently working on the Clipsal 500 race track infrastructure upgrade in Adelaide South Australia. Together with KBR we have assisted in the placement of over 600 screw piles for the new grandstand shade structure, especially designed in Germany to offer spectators a cooler view of the spectacular V8 Clipsal 500 race.

Pile caps were also placed for the main grandstand and 'hairpin' corner stand. SFL in association with S.E.M. Civil also assisted with all associated civil works including, piling and pile caps for the new temporary 3 storey pit building, fire and water mains upgrades together with extensive concrete works. The pit building is a prefabricated structure (made in Germany) and assembled every year and removed to ensure the Adelaide Parklands retains its natural beauty and open spaces

The project is working to a very tight time frame and to date SFL and S.E.M. are on track to finish on time. The superstructure for the shade canopy on pit straight is currently being assembled in order to ensure it is ready for the Clipsal 500 held in March 2009.
